Transform your business with machine-to-machine capabilities.

Verizon technology drives smarter, faster machine-to-machine connections that can lower the cost of doing business and drive new revenue streams.

Businesses like yours are continually seeking new ways to gain a competitive advantage. You need to improve decision making, increase efficiencies, reduce operational costs, improve customer support and create new revenue opportunities. Using wireless machine-to-machine communications in your business operations can help give you the competitive edge you need. Our technology powers machine-to-machine services, allowing you to connect devices and systems intelligently throughout your operations, which in turn enables a greater exchange of information between your business infrastructure and remote assets.

The Verizon Wireless Machine to Machine Management Center helps you manage, troubleshoot and control your machine-to-machine devices. Now you can securely connect smart devices, remote assets, machines and systems across a wireless network known for its coverage and reliability.

Choose the network architecture that’s right for your business.

The Machine to Machine Management Center provides flexible options for your private network architecture. Tiered-hierarchy private network architecture via nPhase allows you to minimize your infrastructure cost, while direct Verizon Wireless Private Network architecture allows you more control of your private network.

Also, you can manage your device connectivity, provisioning and usage through the Machine to Machine Management Center portal or Unified Web Services application programming interfaces (APIs).

If you currently have Private Network with Verizon Wireless, you can get a major subset of the Machine to Machine Management Center features without altering your current private network connectivity.

Experience the benefits of rich device management.

Using the Machine to Machine Management Center helps you:

+ Deliver multiple revenue-generating services.
  - Meet your customer satisfaction and support requirements.
+ Improve device connectivity, provisioning and usage management.
  - Manage your remote devices either using the self-service portals or by integrating Unified Web Services APIs into your enterprise applications.

ENSURE REVENUE-GENERATING OPERATIONS HAVE THE CONNECTIVITY REQUIRED: A BANKING CASE STUDY.

A bank runs its business operations using local landlines and would like to ensure continuous service without interruptions. It needs to secure primary access across a diverse geographic coverage area with a network capable of providing financial services. The Verizon Wireless Private Network links the bank’s data infrastructure to remote locations via a dedicated connection, improving network performance and data flow. And the Machine to Machine Management Center portal helps monitor connections and control operations. With the Machine to Machine Management Center, the bank has near real-time visibility into endpoints via notification, which enables them to handle interruptions more efficiently and ensure revenue-generating operations have the connectivity required.
Ensure business continuity with an efficient and reliable configuration that enables a reliable data network connection.

- Provide redundant connectivity that supports your continuity of operations and disaster recovery plans.

Maintain data security using secure wireless and Internet technology that segments your data from the public Internet.

- Connect your data infrastructure to remote locations.
- Give remote workers access to your company data networks.

**Why the Machine to Machine Management Center?**
The Machine to Machine Management Center helps you bring together automation, insight and greater control over your operations. Our combined global network, IT and communications solutions allow you to connect devices, systems and machines throughout your enterprise to help you become more aware and your business more agile, while managing risk and powering sustainability. Verizon has proven expertise to help you transform your business with the most advanced technologies.
